TRANSPORTATION POOLED FUND PROGRAM QUARTERLY PROGRESS REPORT

Lead Agency (FHWA or State DOT): <u>Federal Highway Administration (FHWA)</u>

INSTRUCTIONS:

Project Managers and/or research project investigators should complete a quarterly progress report for each calendar quarter during which the projects are active. Please provide a project schedule status of the research activities tied to each task that is defined in the proposal; a percentage completion of each task; a concise discussion (2 or 3 sentences) of the current status, including accomplishments and problems encountered, if any. List all tasks, even if no work was done during this period.

Transportation Pooled Fund Program Project	Transportation Pooled Fund Program - Report Period:
<i>#TPF-5(478)</i>	⊠Quarter 1 (January 1 – March 31) [2023]
	\Box Quarter 2 (April 1 – June 30)
Note: Obligation transactions must be completed	\Box Quarter 3 (July 1 – September 30)
prior to the project end date.	\Box Quarter 4 (October 1 – December 31)

Project Title:

Accelerated Implementation and Deployment of Pavement Technologies (AIDPT) Pooled Fund

Pooled Fund Study Description:

Background:

Since 2013, FHWA's Accelerated Implementation and Deployment of Pavement Technologies (AIDPT) Program, in partnership with State Departments of Transportation (DOTs), academia and industry, has identified asphalt and concrete paving advancements and seek to implement effective strategies for rapid deployment of new and promising technologies. Through the leveraging of Federal investments with State DOT partnerships, the AIDPT Pooled Fund study aims to advance deployment of engineering design criteria and specifications for new and efficient practices, products, and materials that support processes of importance to FHWA and State DOT partners.

The AIDPT Pooled Fund Study is an opportunity for participating states to advance deployment of the innovative technologies in interest areas including, but not limited to, Balanced Mix Design (BMD) for asphalt, performance engineered mixture (PEM) for concrete, pavement preservation, sustainability, resiliency or any other pavement management strategy that improves decision-making processes, technical frameworks, education efforts, and stakeholder engagement.

As this pooled fund is designed, FHWA collaborates with each DOT to define the parameters of each state pavement technology project. The above-mentioned topics were identified in the initial solicitation; however, as noted, other topics are considered when proposed by participating DOTs. The study provides up to \$250,000, up to 100 hours of technical assistance, and resources for developing case study reports and videos for each selected pavement technology project. Additionally, FHWA plans to host a website for publishing case studies and other relevant project documents, as well as peer exchanges for showcasing lessons learned and best practices from the projects. Each state DOT is expected to participate in pooled fund meeting opportunities and actively collaborate with other states and FHWA to advance these initiatives. The state DOT will complete a report documenting the initiative and outcomes of selected state DOT accelerated pavement technologies projects.

Table 3: Funding Transfers by Agency

State Project Updates

Alabama: Alabama Department of Transportation (ALDOT)

Progress this Quarter:

Project Highlights: Balanced Mixture Design (BMD): The foundation of BMD specifications resulted from pilot and field sections as long-term field evaluation of BMD test sections for benchmarking and determination of performance testing variability during production.

ALDOT is in the process of implementing Balanced Mixture Design (BMD) concepts into construction specifications. ALDOT has evaluated available performance test methods, begun collecting BMD data for current mixture designs, and have preliminary thresholds for quality acceptance.

Key Project Milestones:

- Completed a revised project proposal based on collaboration with National Center for Asphalt Technology (NCAT) May 2023
- Project letting November 2023
- Construction test sections Mid 2024
- Preliminary field performance measurements Spring/summer 2025
- Long term field performance measurements 2026 and beyond

Anticipated work next quarter:

We plan to let the project for construction in the second quarter of 2024.

Significant Results:

There are no results to report currently.

Potential Implementation:

We do not have sufficient information for this.

Quarterly Project Statistics:

State	Total Projec	t Budget	Total Cost to I Project This Q	Date for Duarter	Percentage of Completed to	Work Date
AL:	\$250,000.00		Original budget	t: \$250,000.00	(TBD for Q4)	
Total Project Expenses		Total Amount of Funds		Total Percentage of		
and Pe	rcentage This	Quarter	Expended		Time Used to Date	
\$0.00			(TBD for Q4)		\$0%	
Allocations:	2021	2022	2023	2024	2025	2026

Circumstance affecting project or budget: Our greatest concern at this time is testing the possible project locations using a profiler and drilling cores to ensure that the experimental mixes will be place on reasonably similar underlying layers. [There are no circumstances within ALDOT's control expected to affect the project or budget. The project proposal was updated on May 2, 2023. ALDOT is on schedule to demonstrate successes with BMD specifications that could potentially extend to broader applications directly or with region specific modifications, as determined appropriate. Any modifications to the specifications will need to be determined by any region considering the ALDOT BMD research and application results.]

Arizona: Arizona Department of Transportation (ADOT)

Progress this Quarter:

Project Highlights: Resilience: Pavement Performance and Climate Data Analysis

It is anticipated that the effort would measurably advance FHWA / State DOT state of the practice and tools testing as it relates to linking climate models, climate data, pavement, materials, and sustainability and resilience for weather and natural hazard risk.

Key Project Milestones:

- Initial climate model data downloaded in 2022.

- ADOT initiated the following activities during the 3rd quarter and identify the activities as ongoing for the 4th quarter. Climate model data synthesis and starting analysis.

FHWA CMIP 5 with LOCA data sets was utilized.

https://www.fhwa.dot.gov/engineering/hydraulics/software/cmip_processing_tool_version2.cfm

Data consists of 5.9 terabytes (TB) of high resolution extracted from eighteen (18) General Circulation Models (GCM).

• The current efforts are focused on sorting through pavement corridor case study candidates and acquiring historical as-builts for identified pavement sections.

• Narrowed the case study pool to ten system locations but need to get to four locations as scoped in the proposal.

Anticipated work next quarter:

No updated information provided. ADOT will continue working on the key project activities noted in the key milestones.

Significant Results:

No updated information provided.

Potential Implementation:

Future heat and precipitation (2100) analysis will contribute to drafting pavement design specifications.

Quarterly Project Statistics:

State	Total Project Budget		Total Cost to	Total Cost to Date for		Percentage of Work

Allocations:	2021	2022	2023	2024	2025	2026	
	\$200,000.00	\$50,000.00					
Circumstance affecting project or budget: None reported for Quarter 1.							

Colorado: Colorado Department of Transportation (CDOT)

Progress this Quarter:

Project Highlights: Benchmarking Transportation Sector Green House Gas (GHG) Emissions, EPDs

Colorado HB 21-1303 "Buy Clean Colorado Act" directs the Office of State Architecture and Colorado Department of Transportation (CDOT) to establish policies that reduce greenhouse gas emissions over time by accounting for and limiting the global warming potential (GWP) of key construction materials in state-funded building and transportation projects.

The Office of the State Architect is responsible for Section 117 of the bill, which covers building construction, and CDOT is responsible for Section 118 of the bill, which covers transportation infrastructure that includes road, highway, and bridge construction. The eligible construction materials listed under Section 118 of the bill are asphalt and asphalt mixtures, cement and concrete mixtures, and steel.

- Milestone #1 Specification in place to require EPD submittals by July 1, 2022 met.
- Milestone #2 Year 2 EPD submittal requirements for additional materials July 2023.
 - Finalization of CDOT project support tools to determine EPD collection requirements based on materials quantities/bid items consistent with protocol document.

- Issuance of Construction Bulletin to CDOT staff conveying support tools and relevant information meeting.
- EPD Quantity Conversion Spreadsheet Version 1 created and shared with CDOT staff in August.
- Conducted a Contractor EPD Workshop on August 16, 2022. Attendees from Steel, Asphalt, and Concrete provided perspective, in addition to the CDOT EPD Team.
- Created internal EPD Database in OnBase in August.
- o Began Precast Industry Stakeholder Outreach Meetings in September.

Anticipated work next quarter:

- Continue outreach to industries targeted for EPD data collection in Year 2/Year 3 of program (precast concrete/steel). Colorado specific ACPA/NCPA Meeting date: December 15, 2022.
- November 14 meeting with UL on CDOT's Steel PCR comments
- Continue planning and discussion on how to address disengaged and unsupportive contractors.
- Prepare CDOT Annual EPD Report

Significant Results:

Developed methodology for collecting, reviewing and cataloging GHG's emissions through Environmental Product Declarations for various construction materials used on CDOT projects, focusing on Concrete, Asphalt, and Steel materials. Specification approved through CDOT process and incorporated into eligible projects. EPD website developed and maintained at https://www.codot.gov/business/designsupport/materials-and-geotechnical/epd. Specification and protocol document approved.

Potential Implementation:

As part of HB 21-1303 "Buy Clean Colorado Act", CDOT began collecting EPD data on eligible construction materials (i.e. asphalt and asphalt mixtures, cement and concrete mixtures, and steel) on July 1, 2022. By January 1, 2025, the bill specifically requires CDOT to establish a policy that sets maximum acceptable global warming potential (GWP) benchmark limits for the eligible materials. CDOT has developed a protocol for collection of EPD data, and that protocol currently limits the EPD data collection to the cradle-to-gate life cycle modules (A1-A3) and requests single-facility EPDs. There are three distinct types of EPDs: an industrywide (also known as an industry average) EPD; a company-wide (i.e., representing multiple facilities) EPD; and a single-facility EPD, which reports the environmental profile of a specific product (e.g., a specific asphalt mixture produced at a specific facility). The CDOT EPD protocol requests contractors provide single-facility EPDs since they typically have higher resolution and are better suited to derive meaningful regionally applicable benchmarks.

Quarterly Project Statistics:

State	Total Project Budget		Total Cost to Date for Project		Percentage of Work Completed to Date

	\$250,000.00						
Circumstance affecting project or budget: None reported for Quarter 1.							

Georgia:

Progress this Quarter:

Project Highlights: Crack Mitigation/ Pavement Preservation Techniques [WITHDRAWN]

The GDOT State Maintenance Office has determined that there is no immediate research needs for pavement preservation. Therefore, GDOT is withdrawing its previous research topic. The GDOT Office of Materials and Testing typically leads materials research. However, there are no immediate research needs and a new topic has not been identified.

Anticipated work next quarter:

To Be Determined, based on Project Approval.

Significant Results:

N/A.

Potential Implementation:

N/A.

Quarterly Project Statistics:

State	Total Project B	udget	Total Cost to Date for		Percentage of Work	
				Project		o Date

Allocations:	2021	2022	2023	2024	2025	2026

Circumstance affecting project or budget: GDOT determined that it would be best to withdraw the initial pavement preservation topic.

Idaho:

Progress this Quarter:

Project Highlights: The Idaho Transportation Department (ITD) is still working to finalize a specific project focus. On April 7th, we submitted a proposal titled *Integrating Construction and Materials Testing Data with Geospatial Locations for Development of a Construction and Materials Testing Database*. ITD is waiting to hear back on the proposal.

Anticipated work next quarter:

To Be Determined, based on Project Approval.

Significant Results:

N/A.

Potential Implementation:

N/A.

Illinois: Illinois Department of Transportation (IDOT)

Progress this Quarter:

Project Highlights: Profiler Comparison - Benchmark Profiler vs. the Urban Low Speed Profiler

Repair/Upgrade profilers, setup track at ICART, complete testing at ICART, Analyze testing results; draft report on results, track setup, and conclusions finalized; create operators manuals for both benchmark and urban low speed profilers.

IDOT does not report progress on the project scope of work this quarter. The primary progress is related to working final coordination to get the AIDPT project contract in place.

Federal FY2023 commitment contribution transfer planned (to be sent to FHWA during FY2023 2nd quarter).

Anticipated work next quarter:

When a contract is in place, work will begin on assessing the two pieces of equipment and beginning the pooled fund scope of work during the 2023 quarter 4.

Significant Results:

None to date.

Potential Implementation:

The urban low speed profiler will be utilized as a reference device or potentially a benchmark device at ICART if it is proven to meet the repeatability and accuracy results.

Quarterly Project Statistics:

State	Total Project B	udget	Total Cost to Date for		Percentage of Work	
			Project		Completed to Date	
IL:	\$300,000 (Feder	al: \$250,000.00)	\$50,842.86		25%	
Total Project Expenses			Total Amount of Funds		Total Percentage of	
and Percentage This Quarter			Expended This Quarter		Time Used to Date	
\$50,842.86 (17%)		\$50,842.86		21%		
Allocations:	2021	2022	2023	2024	2025	2026

Circumstance affecting project or budget: The project has been delayed with the state funded work to make the equipment operational. However, the project is progressing towards completion.

Iowa: Iowa Department of Transportation (IowaDOT)

Progress this Quarter: No change from Quarter 2

Project Highlights: Foundations

Iowa DOT is in the first year of a 5-year plan to implement the technologies and field training that will allow for rapid measurement, real-time construction compaction monitoring, and modulus-based field control, as implemented on four Spring 2022 pavement construction/grading projects (FY 2022 - 4 to 5 projects). Currently deploying VIC monitoring, e-construction compaction reporting, and APLT modulus measurement technology on two pilot projects currently under construction. The state supports performance-based specifications.

Anticipated work next quarter:

Validated Intelligent Compaction (VIC) and Automated Plate Load Testing (APLT): Continue VIC monitoring deployment, e-construction compaction reporting, APLT modulus measurement technology on two pilot projects currently under construction and ten additional projects are anticipated for FY2023.

Significant Results:

Utilized the Iowa DOT STIC and AID in-situ measurement projects to pilot two innovative technologies that previously were not used in the state of Iowa, which includes modulus-based measurements. Outcomes include model specifications, training materials, and workflow processes to assist agencies in developing a roadmap for modulus-based pavement foundation construction in their state.

Potential Implementation:

The DOT is committed to moving foundation construction requirements from the current Method specification to performance-based requirements. The objective of this project will be to support the implementation of technologies on additional projects for performance-based specifications.

Quarterly Project Statistics:

North Dakota: North Dakota Department of Transportation (NDDOT)

Progress this Quarter:

Project Highlights: Implementing Balanced Mix Design

Project start 12/16/2022, Final Closeout 2027.

National Center for Asphalt Technology (NCAT) and NDDOT are developing BMD test sections for a validation study. We are working with a stakeholder group representing contractors and industry to develop the test sections for a 2024 construction project on ND 14.

Anticipated work next quarter:

Finalize test section project details.

Significant Results:

No significant results currently.

Potential Implementation:

Implementation of BMD through Pilot Projects.

Quarterly Project Statistics:

Pennsylvania: Pennsylvania Department of Transportation (PennDOT)

Progress this Quarter:

Project Highlights: Implementation of Mastics at the Pennsylvania DOT

The PennDOT determined the best area of pavement management program support to be using mastic materials for preservation activities that would evolve in developing statewide application specific specifications. The PennDOT State Transportation Innovation Council (STIC) was a source for supporting equipment acquisitions during the earlier phases of mastic material application. The AIDPT project component of the ongoing PennDOT efforts will include technical assistance and collaboration to determine the extent of mastic materials use.

Research applications, new equipment, and specifications used by other states Summer 2023 Develop PennDOT draft specification Fall 2023 Finalize PennDOT specification Summer 2024.

Anticipated work next quarter:

Continue to research other state Mastic Specifications, and start on a first draft for PA.

Significant Results:

To date research has been started by PennDOT to look into current specifications for Mastic.

Potential Implementation:

- a. Research applications, new equipment, and specifications used by other states Summer 2023
- b. Develop PennDOT draft specification Fall 2023
- c. Finalize PennDOT specification Summer 2024.

Texas: Texas Department of Transportation (TxDOT)

Progress this Quarter: No change from Quarter 2

Project Highlights: Asphalt - Balance Mix Design

Several balanced mix design sections have been constructed to compare a control mix design with several balanced mixed designs that encompass several factors: recycled materials, rejuvenators, different binder grades, etc. These projects are being monitored annually to evaluate distress with aging under traffic loading conditions. Additionally, several new balanced mix design projects have been identified for evaluation during multiple days of construction. TxDOT completed a phase 1 balanced mix design initiative on 8/31/2022 and has commenced phase 2 to be completed in 2025.

Anticipated work next quarter:

Continued monitoring and analysis of field projects constructed during phase 1 balanced mix design initiative. Mix design support for newly identified phase 2 field projects. Performance test benchmarking using historical data and laboratory testing.

Significant Results:

Preliminary field performance data has been correlated to laboratory tests with promising results. Mitigation strategies for underperforming mixtures or mixtures with high amounts of recycled materials have been developed. An analysis is ongoing of how factors such as pavement components, traffic levels, condition history, and localized weather affect pavement performance. As more field performance data is collected, these factors will be correlated to observed distresses to develop/ strengthen mix design guidance.

Potential Implementation:

Documentation of the performance of balanced mix design sections in the state of Texas will allow for improvements in balanced mix design efforts towards the implementation of full performance-based specifications. Field monitoring data tied to performance tests shared across the industry will allow for data-based specifications. Understanding the effect of factors such as pavement components, traffic levels, condition history, and localized weather will allow for better design methods.
