## TPF Program Standard Quarterly Reporting Format –12/2012

\$10,713.99

**Project Description:** Ultra-High Performance Concrete (UHPC) has been recognized as a choice of material for mitigating bridge infrastructure challenges as well as to introduce innovative construction projects. In recent years, the use of UHPC has gained momentum in bridge projects across the country. However, formal structural design guidance for this material does not exist in North America, and therefore a comprehensive effort is required to formulate recommended design guidance so that the application of this material can be broadened.

The overall objective of this study is to facilitate advancement in the state-of-the-practice for UHPC in the US highway sector, which will include development of a design and construction guide specification. These advancements will also focus on other critical needs that are currently hindering the wider use of UHPC

A Steering Committee will be formed for this Pooled Fund Project. This Steering Committee can include contributing entities and will be led by the host State. The tasks are:

- Coordinate meetings amongst committee members with the goal of study execution and information dissemination.
- 2. Provide guidance on national level advancement efforts.
- 3. Develop and prioritize research needs statements.
- 4. Develop, verify, and/or standardize test methods for assessment of UHPC material properties.
- 5. Complete structural performance-related research as necessary to develop greater knowledge of structural behavior.
- Complete construction-related research as necessary to develop greater understanding of optimal construction processes.
- 7. Coordinate, share, and advance existing special provisions for the use of UHPC in highway construction projects.

#### Progress this Quarter (includes meetings, work plan status, contract status, significant progress, etc.):

#### **December 31, 2018**

Few specimens were cast as per the mix design given by one of the suppliers to evaluate the workability and strength of the concrete. Based on the results, discussions were made with the supplier regarding the water content ratio and the possibility of slightly reducing this ratio.

### Anticipated work next quarter:

Casting of specimens and sending the specimens to the selected labs.

#### Significant Results:

The tension tests will focus on finalizing a tension test method.
